

Dr Manthan Prajapati, MD

ECFMG-Certified Residency Applicant | AAMC ID: 16328403

About Me

ECFMG-certified international medical graduate and licensed general practitioner in India, having worked independently across academic hospital wards, primary care, and ICU settings. Complemented by 6 months of hands-on US clinical experience in both outpatient and inpatient settings—taking vitals, histories, and complaints, documenting across EMR systems including EPIC, eClinicalWorks, CureMD, Sarna, and ProVation, participating in minor procedures and case presentations, and coordinating with medical assistants and nurse practitioners as part of the care team. Actively engaged in research, with peer-reviewed publications and ongoing projects. Alongside medicine, I've mentored juniors through their USMLE journey, led university events as a student leader, and worked with an NGO-run mobile medical unit to provide primary care to underserved rural populations. Outside of medicine, I enjoy hiking, cooking, and traveling—things that keep me balanced and connected to life beyond the clinic.

Education

Doctor of Medicine, M.D.

Penza State University Medical Institute, Penza, Russian Federation — September 2017 – July 2023

USMLE Scores

USMLE Step 1: Passed

USMLE Step 2 CK: 239

USMLE Step 3: 219

ECFMG Certification

Certified

USA Clinical Experience

Clinical Extern — SUNY Downstate University/ Central Brooklyn Physician, Brooklyn, NY

Aug 2026

- Completed a 4-week externship under Dr. Margaret Donat, MD, Program Director, and her team, participating in comprehensive, longitudinal patient care under direct supervision.
- Performed patient triage, vital signs assessment, and focused physical examinations; conducted preventive health screenings including PHQ-9 depression screening, Cologuard, DEXA scan, mammogram, and Pap smear recommendations per age- and risk-based guidelines
- Identified a classic case of ACE inhibitor-induced angioedema through focused history-taking and physical exam, contributing to timely medication review
- Assisted with in-clinic echocardiography and EKG interpretation; recognized pathologic findings including congestive heart failure and left ventricular hypertrophy in hypertensive patients
- Independently drafted detailed clinical notes (HPI, Assessment & Plan) in eClinicalWorks EMR, including medication management and prescription refills, with all final decisions reviewed and confirmed with attending
- Utilized Epocrates for point-of-care drug reference, dosing guidance, and clinical decision support
- Conducted patient telephone follow-up, communicating lab results and coordinating next steps in the care plan

- Practiced patient-centered communication, including motivational interviewing techniques with non-adherent or resistant patients, and incorporated visual/physical exam cues (e.g., skin turgor) into patient counseling on hydration and self-care
- Gained exposure to insurance coverage considerations and their impact on treatment planning and medication selection
- Strengthened understanding of medical ethics, professionalism, and physician-patient communication under close mentorship

Clinical Extern — RWJBarnabas Health, NJ Primary Care, Jersey City, NJ

July 2026

- Rotated with Dr. Deval Gadhvi and Dr. Prahalad Gadhavi, MD, in a primary care practice (70–100 patients/day), personally working up 30 patients daily — taking history, vitals, and complaints, and independently documenting in EPIC EMR, including writing the HPI and assessment/treatment plan notes based on the doctor's discussion and advice with the patient.
- Saw a wide range of conditions across all systems in this primary care setting — including Lyme disease, ADHD, STDs, diabetes, thyroid disorders, and musculoskeletal pain — which gave me a broad, real-world view of primary care practice.
- Performed and interpreted Dix-Hallpike and Epley maneuvers independently to diagnose and treat BPPV under supervision. Performed EKGs on high-risk patients and assisted with suture removal
- Connected an individual patient presentation to an active community cyclospora outbreak, integrating public health surveillance awareness into clinical decision-making, and educated patients on preventive measures and disease awareness beyond the immediate visit
- Delivered preventive care counseling including PHQ-9/GAD-7 administration, GLP-1 therapy education, and individualized weight-management planning; conducted USCIS immigration exams, travel medicine counseling, and Hepatitis B vaccination
- Coordinate with medical assistants, nurse practitioners, and phlebotomy/pathology staff to keep patient flow smooth during high-volume days.

Clinical Extern — St. Joseph's University Medical Center & Gastroenterology Associates of New Jersey (GANJ), Paterson/Clifton, NJ

June 2026

- Completed a 4-week GI rotation under Dr. Parthiv Raval, MD, split between inpatient hospital care and an outpatient clinic.
- Managed outpatient intake for 27–34 patients daily — took detailed histories, reviewed prior charts/reports, and recorded vitals.
- Performed complete physical exams under the doctor's supervision; detected an irregularly irregular pulse on auscultation (suspected AFib), and found several undetected umbilical hernias when patients sat up, confirmed with the doctor, along with hemorrhoids and abdominal tenderness.
- Documented in eClinicalWorks (outpatient), Sarna EMR (inpatient, St. Joseph's), and ProVation (GANJ endoscopy center) — including pre-assessment documents, procedure notes, post-endoscopy reports with image selection, and discharge summaries, under supervision.
- Applied ICD-10 coding and learned practical use of level 2, 3, and 4 clinical billing.
- Counseled patients on screening colonoscopies, explaining diet/prep instructions and procedure steps in simple terms.
- Observed around 20 endoscopic procedures (EGDs and colonoscopies) daily, identifying pathologies including colon polyps, ulcerative colitis, pseudopolyps, and fundic gland polyps in chronic PPI users.
- Assisted nursing staff with pre-procedure prep (ECG/O2 leads) and helped with post-op reports and patient discharge under supervision.

Clinical Extern — UChicago Medicine AdventHealth GlenOaks, Glendale Heights, IL

Aug 2025 – Sep 2025

- Completed a 4-week externship with Dr. Mohammed Shakaib, MD, covering inpatient, outpatient, and dialysis center.

- Went for morning rounds daily and reviewed patient charts, lab reports, and consultant notes.
- Presented patient cases every afternoon to Dr. Shakaib and other students using EPIC EMR system; during one case, noticed a pneumonia patient was taking Jardiance and told the doctor it could be increasing his creatinine level — doctor agreed and stopped the medication.
- In outpatient clinic, saw 17–20 patients — took vitals, reviewed history, lab reports, and medication list, then presented each case to the doctor before writing notes and treatment plan using CureMD EMR.
- Explained to ESRD patients about their dialysis schedule, what to expect during hemodialysis, and the importance of fluid and diet restrictions; also counseled diabetic patients about taking their medications on time to prevent kidney damage.
- Joined daily discussions with doctors, nurses, and case managers about complex patients — learned how different team members work together to plan safe discharges, including arranging follow-up appointments, checking insurance, and making sure patients have medications before leaving the hospital.

Clinical Extern — Rush University Medical Center Associates in Primary Care, Chicago, IL

Jul 2025 – Aug 2025

- Completed a 4 week rotation with Dr. Cedric Coleman, MD, Associate Professor in a primary care clinic on the South Side of Chicago, serving mostly African American patients from the local community.
- Saw around 10 - 15 patients a day, mostly with chronic conditions such as diabetes, hypertension, hyperlipidemia, and Autoimmune Polyglandular syndrome — fewer patients than other rotations, but the doctor spent 30-60 minutes with each one, which showed me real continuity of care, since the doctor knew each patient's history, family, and background well.
- Doctor often discussed cases using MKSAP and referred to research/evidence-based data while explaining treatment decisions, which helped me connect research data and textbook knowledge to real patient management.
- Took detailed history including social history, medications, screening questions, and vaccine status, confirmed medications, and took vitals; presented each case to the doctor, then wrote detailed history, progress notes, and treatment notes using eClinicalWorks EMR.
- Sent prescriptions and voice call to the pharmacy under the doctor's supervision.

Clinical Extern — Houston Methodist West Hospital / Bear Creek Pediatric Clinic, Houston, TX

Jun 2025 – Jul 2025

- Completed a 4-week rotation covering inpatient adult care at Houston Methodist West Hospital and outpatient pediatric care at Bear Creek Pediatric Clinic.
- On daily rounds, reviewed charts, labs, and reports using EPIC EMR for complex patients with CHF, CKD, and diabetes, and took part in management plan discussions.
- For one patient with CHF, CKD, and ongoing diarrhea, noticed her lunch tray had high-fiber food like salad and beans, which could make her diarrhea worse — talked to the doctor then verified and arranged a suitable meal for her.
- At Bear Creek Pediatric Clinic, saw child patients and assisted with rapid strep testing and vision screening using Snellen and HOTV charts.
- Explained to parents how to properly use a nebulizer at home for their child's breathing treatment.
- Assisted with well-child checkups, immunizations, and sports physicals — also helped with developmental and behavioral screenings for children with autism and developmental delays.

India Clinical Experience

Junior Resident — GMERS Medical College & Hospital, Gandhinagar, India

Sep 2023 – May 2025

- Worked as a physician in an academic hospital, managing 20–30 general ward and ICU patients daily
- Did daily rounds, assessed patient progress, counseled patients and families, and ordered treatments as part of a multidisciplinary team.
- Managed acute and emergency conditions including MI, COPD exacerbation, stroke, ACS, DKA, heart failure, and acute TB exacerbation.
- Took part in Code Blue and Code FAST responses, including coordinating thrombolysis and advanced life support measures.
- Collected ABG samples and assessed patients for the need of ventilator/life support escalation.

- Taught medical students clinical skills including ECG interpretation, ABG interpretation, and suture technique
- Organized monthly health camps in rural villages through the Family Adoption Program — arranged transportation and funding, took medical students to sites, and provided on-site patient care with faculties, seeing around 130 patients per camp.
- Participated in clinical research with the public health department — contributed to publications on COPD risk factors and the role of yoga in postpartum care.

Leadership, Teaching & Volunteer

Student Leader & Academic Mentor — Penza State University, Penza, Russia

Sep 2019 – Jun 2023

- As the first Indian student from my university to pass the USMLE, I had the opportunity to guide and mentor many junior and senior medical students. I personally mentored over 25 students through one-on-one sessions, tailoring my advice to each student's stage of medical school and helping them navigate both the USMLE and Indian medical licensing exam.
- Served as elected academic group leader, acting as the main point of contact between students and faculty for schedules and academic concerns.
- Represented student concerns in faculty meetings — advocated for curriculum improvements and exam scheduling changes that benefited the entire class.
- Worked with students from over 15 different countries — developed strong cross-cultural communication and teamwork skills in a diverse international environment.
- Handled music and location for large cultural events (Diwali, Navratri, Holi) with 400+ attendees — personally performed as DJ/musician at several events, managing songs and beats to match the event's flow.
- Organized group trips to different cities during summer breaks, handling transportation, accommodation, site visits, and finances for the group.

Community Health Volunteer Medical Officer — IGF Foundation (Mobile Medical Unit) Ahmedabad, India

Oct 2025 – May 2026

- Worked as a medical officer with an NGO-run mobile medical unit, traveling to rural and underserved communities with limited access to healthcare.
- Started each day with the pharmacist, reviewing what medications were needed for that location and loading supplies into the vehicle before travel.
- Set up a clinic site with tables and necessary tools — saw 80–120 patients daily, using IGF's own EMR system to document history, complaints, vitals, and treatments.
- Prescribed medications directly in the EMR — pharmacists accessed the system from the vehicle and dispensed medications to patients on site.
- Spent time talking with each patient in detail — many were from rural areas with limited awareness of preventive healthcare, so explained conditions, treatments, and prevention in a way they could understand.
- Performed on-site wound care and dressings, and referred complex cases to higher centers for further management
- Distributed sanitary pads and iron folic acid tablets to menstruating girls under government guidelines, supporting menstrual hygiene and anemia prevention in the community.
